DESCRIPTORS: *Hormones, Etiology, *Hypertension.

In human essential hypertension there is no absolute over-production of one or several known hormones, which can be made responsible for the rise in pressure. The excess production of aldosterone observed in malignant hypertension should be viewed as a consequence and not the cause of cardiovascular damage. The hypertension produced by endogenous overproduction of adrenocortical hormones must be considered (Biological Sciences--Pathology, TT, v. 10, no. 12)(over)
